

ARON BERGER

6752 Amur Drive, Columbus, Ohio 43235
614-420-1683 | aronjberger@gmail.com | aronberger.com

Electrical Engineering student at the University of Cincinnati (3.95 GPA) with three co-op rotations delivering measurable impact in PCB design, test infrastructure, and process automation.

WORK EXPERIENCE

Electronics Quality Engineer

August 2024 – April 2026

Valco Melton, Cincinnati, Ohio

- Designed and implemented a PCB retrofit solution that enhanced an existing test harness, extending its functionality to support the latest cable variants.
- Overhauled a burn-in rack's 80-cable infrastructure, improving defect detection sensitivity and preventing subtle errors from reaching the field.
- Strengthened electrostatic discharge safety protocols by utilizing quantitative data and industry standards to devise solutions that helped resolve critical ISO audit findings.
- Automated data collection and formatting for monthly continuous-improvement meetings, reducing information analysis time by 70%.
- Engineered a scalable Microsoft Power Query solution to automate parts list aggregation and comparison across control unit families; replacing a manual process that degraded with complexity, improving assembly accuracy and consistency.

EDUCATION

Bachelor of Science, Electrical Engineering

August 2023 – April 2028

University of Cincinnati, Cincinnati, Ohio

- 3.95 GPA
- Relevant Coursework: Digital Design, Electronics I, Network Analysis, Signals and Systems, Semiconductor Devices, Engineer Design Thinking, Semiconductor Physics, Multivariable Calculus, and Differential Equations

SKILLS & INTERESTS

Software: Python, C++, Arduino, SolidWorks, CAMI CableEye, Autodesk Inventor, AutoCAD, Multisim

Hardware: Circuit design, Breadboarding, Soldering, 3D printing

Industry Involvement: IEEE, Geauga Engineering and Robotics 4-H Club Judge

TECHNICAL PROJECTS

Analog Circuit Design and Analysis

August 2025 – December 2025

University of Cincinnati, Cincinnati, Ohio

- Designed and tested common-emitter and common-source amplifier configurations across varying gain levels, demonstrating the critical role of gain control resistors in amplifier performance.
- Analyzed the effect of coupling and bypass capacitor selection on input and output waveforms, developing practical intuition for frequency response and signal integrity tradeoffs.
- Constructed a full-wave rectifier from discrete stages, gaining hands-on insight into how each stage contributes to a stable DC output.

Conway's Game of Life

April 2024 – May 2024

University of Cincinnati, Cincinnati, Ohio

- Engineered an embedded implementation of Conway's Game of Life in C++, programming an Arduino Uno to drive an LED matrix display in real time.
- Modeled and analyzed system behavior through iterative simulation loops, leveraging cellular automaton logic to observe emergent patterns across dynamic states.
